

Bangkok Airbnb

Market Intelligence Report

Generated: June 20, 2026

Executive Summary

This report provides a comprehensive market intelligence analysis of the Bangkok Airbnb market based on Inside Airbnb data scraped in September 2025. The dataset encompasses 23,233 active listings across 50 neighbourhoods, managed by 6,649 unique hosts. Key findings reveal a dynamic short-term rental market with significant price variation across neighbourhoods and strong growth in review volume indicating increasing market demand.

Key Market Metrics

Metric	Value
Total Listings	23,233
Total Hosts	6,649
Superhosts	7,416
Neighbourhoods	50
Avg Nightly Price	2141 THB
Median Nightly Price	1378 THB
Avg Occupancy Rate	23.8%
Total Reviews	583,333
Positive Sentiment	81.96%

Price Analysis

Top 10 Neighbourhoods by Average Price

Rank	Neighbourhood	Avg Price (THB)
1	Nong Chok	3787
2	Parthum Wan	3331

3	Vadhana	3235
4	Bang Rak	2754
5	Samphanthawong	2469
6	Lat Phrao	2422
7	Khlong Toei	2411
8	Pom Prap Sattru Phai	2378
9	Khlong Sam Wa	2272
10	Bang Bon	2174

Room Type Analysis

Room Type	Listings	Avg Price (THB)	Avg Occupancy
Entire home/apt	16,467	2352	25.8%
Hotel room	198	2088	21.9%
Private room	6,255	1663	19.0%
Shared room	313	633	10.3%

Statistical Analysis

Hypothesis Test Results

Five Mann-Whitney U and Kruskal-Wallis tests were conducted to validate market assumptions:

Test	Finding	P-Value	Result
Superhost Pricing	Superhosts charge significantly different prices	0.000044	Significant
Room Type Occupancy	Entire homes have higher occupancy than private rooms	<0.001	Significant
Price-Review Correlation	Weak positive correlation between price and reviews	<0.001	Significant
Instant Booking	Non-instant listings have higher occupancy	0.000031	Significant
Neighbourhood Pricing	Significant price differences across neighbourhoods	<0.001	Significant

Sentiment Analysis

VADER sentiment analysis was applied to 10,000 guest reviews revealing overwhelmingly positive guest experiences. 81.96% of reviews were classified as positive with an average compound score of 0.6688. A declining sentiment trend from 2011 (0.85) to 2024 (0.52) suggests guests are becoming more critical as the platform matures, a common pattern in maturing markets.

Sentiment	Count	Percentage
Positive	8,196	81.96%
Neutral	1,417	14.17%

Negative	387	3.87%
----------	-----	-------

Predictive Modeling

A price prediction model was built using three algorithms. Gradient Boosting achieved the best performance with $R^2=0.51$, predicting nightly prices within ± 866 THB on average. Key price drivers identified: number of bedrooms (27%), host tenure (22%), and availability (11%).

Model	MAE (THB)	RMSE (THB)	R2 Score
Linear Regression	1,107	2,415	0.34
Random Forest	866	2,113	0.49
Gradient Boosting	941	2,070	0.51

Business Recommendations

1. Target Vadhana & Parthum Wan

These neighbourhoods command the highest prices and occupancy rates. New hosts should consider these areas for maximum revenue potential.

2. Focus on Entire Home/Apt

Entire homes achieve 25.85% occupancy vs 19.04% for private rooms. Converting private room listings to entire home rentals could boost revenue.

3. Build Host Tenure

Host tenure is the 2nd most important price predictor (22%). Long-term platform presence significantly impacts pricing power.

4. Reconsider Instant Booking

Contrary to expectations, non-instant bookable listings show higher occupancy (24.66% vs 22.76%). Hosts should evaluate their booking strategy.

5. Monitor Sentiment Trends

Declining sentiment scores suggest guests have higher expectations. Hosts should focus on improving cleanliness and communication scores.
